

FOR IMMEDIATE RELEASE

Ro&® Global Partners with MAKAL to Bring Physical Risk Intelligence™ to Workplace Injury and Risk Management

Brisbane, Australia, 12 October 2026: Ro&® Global, developer of the Physical Risk Intelligence™ platform, today announced a channel partnership with MAKAL, a Brisbane-based workplace injury and risk management advisory business.

Under the partnership, Ro&® Global provides the intelligence technology, while MAKAL incorporates the platform into its workplace injury and risk advisory services.

MAKAL will use the platform to analyse existing closed-circuit television (CCTV) and other video footage provided by its clients, helping organisations identify relevant moments within recorded incidents and examine them in context.

Founded by Millie Malaki-loapo, MAKAL draws on almost two decades of professional experience in workers compensation and complex workplace matters.

Leadership Perspectives

“Physical Risk Intelligence™ is built around three fundamental questions: What happened? Why does it matter? What happens next?” said **Roanne Monte, Co-founder and Chief Executive Officer of Ro&® Global**.

“Most organisations already hold the video they need, but understanding what it shows can be challenging. Our partnership with MAKAL brings this capability into workplace injury and risk management, enabling informed, evidence-based decisions grounded in the circumstances of each incident.”

“Technology should amplify professional expertise and keep judgment with the professional. Working with industry specialists like MAKAL helps organisations turn existing video footage into insight they can act on.”

Millie Malaki-loapo, Founder of MAKAL, said the partnership strengthens the way organisations can approach workplace incident reviews.

“In workplace injury management, understanding the circumstances surrounding an incident is critical to determining an appropriate response,” said Malaki-loapo.

“Ro&® Global's technology gives us a better way to examine available video evidence, supporting more focused reviews and practical recommendations for our clients.”

Making Better Use of Existing Video

Organisations already capture video through CCTV and other recording devices, yet reviewing footage following an incident can be time-consuming and resource intensive.

For MAKAL's clients, the partnership means a more structured approach to retrospective video analysis, supporting injury management and risk advisory work.

The collaboration forms part of Ro&® Global's broader strategy to expand access to Physical Risk Intelligence™ through industry-focused channel partnerships.

ENDS

About Ro&® Global

Ro&® Global develops Physical Risk Intelligence™, a video intelligence platform that helps organisations understand and analyse recorded video and relevant operational information.

Working with existing CCTV and video footage, the platform supports incident review, workplace safety, risk management and evidence-informed decision-making by providing greater context and understanding while maintaining human oversight.

Ro&® Global works with private and public-sector organisations and industry partners to support more informed and defensible operational decisions.
